Preface

The data contained in this report represent the complete count of employment and wages for workers covered by unemployment insurance (UI) programs during 1981. State employment security agencies assemble these data from reports filed by employers and tabulate them by industry. The Bureau of Labor Statistics compiles data on a nationwide basis, by State, and by industry.

Detailed data on covered employment and wages in both the private and government sectors are prepared by many State agencies for use in their own programs. These include data by county and for local labor market areas and

are available upon direct request to the State agency at the address listed at the end of this publication.

Material in this publication is in the public domain and may, with appropriate credit, be reproduced without permission.

This publication was prepared in the Office of Employment and Unemployment Statistics, Division of Occupational and Administrative Statistics, under the supervision of Susan C. Hostetter. Statistical and data processing support was provided by Rex A. Tharp, Jerry S. Trach, and Billy R. Medley, of the Office of Survey Processing, Division of Federal/State Periodic Surveys.

Introduction

This publication presents 1981 data on employment and wages based on the 1972 Standard Industrial Classification Manual and 1977 supplement. The data relate to workers covered by unemployment insurance laws and Federal civilian workers covered by the Unemployment Compensation for Federal Employees (UCFE) program. The data for both private and public workers are reported to BLS by the employment security agencies of the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands.

During 1981, employers in private industry provided State employment security agencies with quarterly tax reports on monthly employment and quarterly total and taxable wages and contributions for more than 4.6 million reporting units. Similar reports on monthly employment and quarterly wages were submitted by the Federal Government for over 38,000 installations, by State governments for nearly 44,000 reporting units, and by local governments for 102,000 units. These reports provide a virtual census of employees and their wages for nearly all sectors of the economy. The principal exclusions from UI and UCFE coverage are cited in "Characteristics and Uses of the Data," which follows the tabulations.

Data presented in the tabulations are by industry, State, and ownership, and include average number of reporting units, annual average employment, total wages, and annual and average weekly wages per employee.

This publication contains national totals of all covered employment and wages, by industry (SIC), for 11 broad industry divisions, 84 major industry groups, and almost all of the 1,005 four-digit industry groups. The data also are distributed by State for industry divisions, all major industry groups, and two-digit SIC industries. Data for Federal workers are summarized in industry detail at the national and State levels. In addition, for the largest Federal agencies, the data are summarized by agency.

Most State agencies have covered employment and wage data for both the private and government sectors by county and for important local labor market areas. Most State agencies also can furnish such local data for industrial classifications in greater detail than are shown here. Requests for such detail should be made directly to the State agency at the address listed at the end of this publication.

1/ Workers on the Federal payroll for pay periods including the 12th of the month. (Exception: Employment count for Department of Defense installations is the number of persons on the payroll at the end of the month plus all intermittent employment during the month).

2/ Includes other selected defense agencies in addition to Army, Navy, and Air Force.

- Data not reported.

NOTE: Detail may not add to total due to rounding.

Characteristics and Uses of the Data

Characteristics

The statistics in this publication are compiled from the quarterly tax reports submitted to State employment security agencies by employers subject to State unemployment insurance (UI) laws and Federal agencies subject to the Unemployment Compensation for Federal Employees (UCFE) program. The State agencies compile the data which are then summarized for the Nation by the Bureau of Labor Statistics. (For a list of BLS and State agencies, see the last page of this publication.)

Unemployment insurance laws and coverage

Initially, in 1935, the Federal Unemployment Insurance Tax Act applied only to firms employing at least eight persons 20 weeks in a calendar year and excluded certain categories of workers. Amendments to Title XV of the Social Security Act--the program of Unemployment Compensation for Federal Employees--extended coverage to Federal civilian employees effective January 1, 1955, and to workers in firms employing from four to seven workers effective January 1, 1958.

On January 1, 1958, the Unemployment Compensation for Ex-servicemen (UCX) program superseded earlier temporary programs for veterans, bringing under coverage a significant portion of the men and women who had served in the Armed Forces.

Federal legislation, effective January 1, 1972, extended coverage of State unemployment insurance systems in 28 States to firms employing one or more workers and expanded some of the statutory coverage provisions. The remaining States had previously extended coverage to these small employers. In 1975, legislation also brought coverage to employees of State hospitals, colleges, and universities.

The Federal Unemployment Compensation Amendments of 1976 incorporated major changes in State unemployment insurance laws effective January 1, 1978. Under the Federal Unemployment Tax Act (FUTA), States expanded coverage to include nearly all remaining State and local government employees, employees of nonprofit elementary and secondary schools, and many agricultural and domestic workers. Some States began implementing the amendments as early as 1976. The law also brought the Virgin Islands under the UI system.

Special provisions for railroad workers are made through the Railroad Unemployment Insurance Act. The data reported for the UCX and RRB programs are excluded from the tables in this publication.

Over the years, many States have, through changes in State legislation, provided unemployment insurance protection to additional categories of workers above the base established through Federal legislation. Details on coverage laws are provided in Comparisons of State Unemployment Insurance Laws, available upon request from the Employment and Training Administration of the Department of Labor.

Comparisons between one State and another should take into consideration the differences in laws between States. When UI-covered private industry employment data are compared directly with other employment series, the industry exclusions also should be taken into account. Excluded from coverage in 1981 were approximately 0.3 million agricultural employees, 1.6 million self-employed farmers, 7 million self-employed nonagricultural workers, 1.1 million domestic workers, and 0.7 million unpaid family workers. In addition, 0.4 million State and local government workers were not protected by unemployment compensation laws. Also excluded from industry detail tables in this publication were 1.6 million members of the Armed Forces stationed in the United States, and 0.5 million workers covered by the railroad unemployment insurance system.

Covered employment

In general, employment data represent the number of workers earning wages during the pay period including the 12th of the month. The pay period varies, but for most employers is 7 days, not necessarily a calendar week. An employer who pays on more than one basis (such as production employees weekly and office employees semimonthly) reports the sum of the number of workers on each type of payroll for the appropriate period.

Workers are reported in the State where their jobs are physically located. Private industry employment includes all corporation officials, executives, supervisory personnel, clerical workers, wage earners, piece workers, and part-time workers. It excludes proprietors, the self-employed, unpaid family members, and certain farm and domestic workers.

Persons on paid sick leave, paid holiday, paid vacation, etc., are included. Persons on the payroll of more than one establishment during the period are counted each time reported. Workers are counted even though, in the latter months of the year, their wages may not be subject to the unemployment insurance tax. The employment count excludes workers who earned no wages during the entire applicable pay period because of work stoppages, temporary layoffs, illness, or unpaid vacations.

Employment data reported for Federal civilian employees are a byproduct of the operations of State employment security agencies in administering the provisions of Title XV of the Social Security Act--the program of Unemployment Compensation for Federal Employees. The data are based on reports of monthly employment and quarterly wages submitted each quarter to State agencies for all installations of Federal agencies having employees covered by the act, except the Central Intelligence Agency and the National Security Agency, which are omitted for security reasons.

Employment for any given month for all agencies except the Department of Defense is based on the number of persons on the payroll for the period including the 12th of the month. Installations of the Department of Defense include persons employed on the last workday of the month plus all intermittent

employees--occasional workers who were employed at any time during the month.

Reporting units and employment size

Reporting units are, for the most part, individual establishments. An establishment is generally defined as a single physical location at which one, or predominantly one, type of economic activity is carried on. Most employers covered under the State UI laws operate only one place of business. Multiunit employers having establishments in more than one county, or classifiable in more than one four-digit industry, are requested to submit a separate report for each county and industry. However, employers having a total of fewer than 50 employees in all secondary counties or industries may combine these units with the primary county or industry report.

In government, the equivalent of a reporting unit is an "installation" (a single physical location) and the equivalent of an employer or firm is the organization of which the installation is a part, i.e., the department, agency, or instrumentality responsible for an activity of government. The Federal agencies currently report data separately by installation. Installation reporting permits grouping the data by political subdivisions below the State level, i.e., county, metropolitan area, etc. Some agencies, however, exercise the option to combine small installations into a single "statewide" report.

First-quarter reports tabulate reporting units into nine size categories ranging from three or fewer employees up to 1,000 employees or more. The size-of-unit data are valuable for certain analyses, as, for example, in determining the proportion of new jobs attributable to small business firms. Size-of-firm tabulations were published until 1975, when quarterly publication ceased, and are still available upon request.

Wages

Total wages. Employers in most States report total compensation paid during the calendar quarter, regardless of when the services were performed. A few State laws, however, specify that wages be "payable", or based on all services performed rather than all compensation paid during the quarter. Under most State laws or regulations, wages include bonuses, the cash value of meals and lodging, and tips and other gratuities.

Employer contributions for old-age, survivors, disability, and health insurance (OASDHI), unemployment insurance, workers' compensation, and private pension and welfare funds are not reported as wages. On the other hand, employee contributions for the same purposes, as well as money withheld for income taxes, union dues, etc., are reported even though they are deducted from the worker's gross pay.

Wages of Federal workers represent the gross amount of all payrolls for all pay periods ending within the quarter. This includes cash allowances, the cash equivalent of any type of remuneration, lump-sum payments for terminal leave, withholding taxes, and retirement deductions. Federal employee remuneration generally covers the same types of services as for workers in private industry. Depending on the method used by the Federal agency in preparing its quarterly summary balance (cash or accrual basis), the gross amount of payrolls is either paid or payable.

Taxable wages and contributions. Taxable wages are that part of employees' annual wages subject to the State UI tax. State laws establish the levels of taxable wages, subject to a Federal minimum (\$3,000 in 1933 and raised to \$4,200 in 1972 and \$6,000 in 1978). State laws vary widely, and an increasing number of States have raised taxable wage levels well above the Federal minimum requirement. Taxable wages are reported quarterly, and normally are highest in the first and second quarters, since UI taxes apply to first dollars earned each year. Contributions, the amounts employers pay into the State UI funds, also are reported quarterly, and largely consist of the taxes due on taxable wages for the quarter. However, many States allow employers to reduce their UI tax rates by making voluntary contributions in addition to the legal requirements. The States also allow certain nonprofit organizations and State and local government agencies the option of paying no UI tax, but instead reimbursing the UI fund for any UI benefits charged against their accounts.

Average wages. The reported monthly and quarterly data for covered private and Federal workers are used for calculating average weekly wages. The average weekly wage is computed by dividing total wages for the year by 52 to derive a figure on total wages paid during an average week which then is divided by the corresponding figure on average monthly employment. Similarly, average weekly wages for the quarter are computed by dividing quarterly wages by 13 and then by average quarterly employment. Average annual wages are computed by dividing total wages by average monthly employment. This procedure assumes that "average monthly employment" is approximately the same as in an average week, an assumption justified by the fact that the pay periods for which employment is reported are in most cases single weeks.

Caution should be exercised in using average weekly wages, particularly those developed from quarterly total wages. The wage data for quarters may be affected by strikes, bonus payments (usually in the October-December quarter), retroactive payments, the influx of young summertime workers in the July-September quarter, and the number of payroll periods within each calendar quarter. Average wages also may be understated due to labor turnover, short-time jobs, etc. The number of different workers employed at one time or another during an entire quarter or year is substantially larger than the average number counted as employed in the pay periods including the 12th of each month of the quarter or year. More extensive data on annual per capita earnings of workers can be obtained from special studies prepared by some State employment security agencies from their wage record files.

Industrial classification

Employment and wage data have been classified by industry beginning with 1938. Industry codes are assigned by State agencies to each reportable establishment or installation based on "nature-of-business" information employers submit. The objective is to have each place of business coded on the basis of its principal activities. If a firm in private industry or a government agency conducts different activities at its various establishments or installations, separate industry codes are assigned, to the extent possible, to each activity.

Data for 1981 are classified into 971 four-digit, 420 three-digit, and 84 two-digit industry groups in accordance with the Standard Industrial Classification Manual, 1972 edition and 1977 supplement. The Manual provides for 1,005 four-digit industries, but of these, 34 are coded only to the

three-digit level, because of difficulty in obtaining systematic and accurate four-digit information.

Comparison of UI employment data with other series

County Business Patterns data. Employment covered by UI and employment covered by the Federal Insurance Contributions Act (Social Security) as published in County Business Patterns differ primarily due to: (1) provisions in some State UI laws requiring a minimum employment duration and/or a minimum payroll, or excluding selected groups from UI coverage; (2) differences in industrial classification stemming from diverse definitions of the reporting unit and diverse treatment of central administrative offices and auxiliary units; (3) differences in coverage of nonprofit organizations; (4) other factors, such as variations in employer reports to Federal and State agencies and in methods of processing and adjusting the data.

Employment data in the economic censuses. Information for complete censuses, such as the Census of Manufactures, the Census of Mineral Industries, and the Census of Business, is obtained from establishments, and the concepts of industry employment are similar to those in the UI reports. Employment totals, however, differ due to: (1) exclusions from UI coverage; (2) differences in industrial classification, particularly of central administrative offices and auxiliary units; and (3) differences in pay periods to which the data relate. For example, employment data for the most recent censuses for retail trade, wholesale trade, selected services, and public warehouses represent the pay period including March 12th; for manufacturing and mineral industries, employment represents an average of all production workers on the payroll during the pay periods including the 12th of March, May, August, and November plus all other employees on the payroll during the pay period including March 12; construction industry employment represents the average number of employees on the payroll for the pay periods including the 12th of March, May, August, and November.

Current Population Survey. The Current Population Survey (CPS) is based on a sample of about 60,000 households, while the UI series is based on a universe of establishment payroll data. The household survey counts employed persons; the UI program counts encumbered jobs during the reporting period. Consequently, the CPS includes these persons "with a job but not at work" who earn no wages--for example, workers on extended unpaid leave of absence. The UI series, on the other hand, excludes unpaid workers. The UI employment figure counts separately each job held by multiple job holders. The CPS, however, classifies such workers only in the job on which they work the greatest number of hours. CPS differs from UI in that it includes self-employed persons, unpaid family workers employed 15 hours or more during the survey period, different proportions of agricultural and domestic workers, etc. The CPS data exclude persons under 16 years old, while the UI series counts all covered workers regardless of age.

Current Employment Statistics program. The BLS, the Employment and Training Administration, and State employment security agencies in 49 States, the District of Columbia, Puerto Rico, and the Virgin Islands cooperate in the operation of the Current Employment Statistics (CES) program. In the remaining State, the program is operated by another State agency in cooperation with BLS. In the CES program, the State agencies are responsible for preparing current employment estimates for the States and for the major labor market areas in the States, while the BLS is responsible for monthly national estimates. The

current CES estimates of employment, average weekly and hourly earnings, and average weekly hours are derived from payroll reports from a sample of 189,000 establishments. The national and State industry estimates are benchmarked annually to the UI-covered employment data supplemented by other employment data obtained from various sources, including County Business Patterns.

Office of Personnel Management data. The Office of Personnel Management (OPM) publishes a statistical series on Federal employment and payrolls with information on employing agencies, types of positions and appointments, and characteristics of employees. Data on Federal employment covered by UCFE provide industry and local area detail not available in the OPM series, including an actual count of monthly employment by State. In the OPM series, employment by State is available only for December of each year. Both the UCFE and OPM exclude members of the Armed Forces, temporary emergency workers, and officers and crew members of certain American vessels.

Certain Federal workers are in the UCFE count who are not in the OPM count and vice versa. For example, the UCFE, but not the OPM, counts Defense Department workers paid from nonappropriated funds, employees of county agricultural stabilization and conservation committees, State and area marketing committees, and the Agricultural Extension Service. The OPM, but not the UCFE, counts workers employed outside the United States and its territories, workers paid on a contract or fee basis, paid patients or inmates of Federal homes, hospitals, or institutions, and certain employees of Federal hospitals. UCFE employment relates to the payroll period including the 12th of the month while the OPM counts persons employed on the last workday of the month plus all intermittent employees.

Uses of the Data

The Covered Employment and Wages data, also called the "ES-202" series, are the most complete universe of monthly employment and quarterly wage information by industry, county, and State. They have broad economic significance in evaluating labor market trends and major industry developments, in time series analyses and industry comparisons, and in special studies such as analyses of wages by size of employer.

The program provides data necessary to both the Employment and Training Administration (ETA) and the State employment security agencies in administering the employment security program. These data accurately reflect the extent of coverage of the State unemployment laws and are used to measure UI revenues and disbursements; national, State, and local area employment; and total and taxable wage trends. The information allows actuarial studies, determination of experience ratings, maximum benefit levels, and areas needing Federal assistance, and also helps ensure the solvency of the Unemployment Insurance funds. The ES-202 data are used to compute State insured unemployment rates and national averages of these rates. The rates, in turn, at specified levels trigger federally subsidized extended Unemployment Insurance benefit programs.

The ES-202 data are also used by a variety of BLS programs. They serve, for example, as the basic source of benchmark information for employment by industry and by size of firm in the Current Employment Statistics program (BLS-790). The Unemployment Insurance Name and Address File, developed in conjunction with the ES-202 report, also serves as a national sampling frame

for establishment surveys such as the Industry Wage Survey, Area Wage Survey, Occupational Employment Statistics, and other establishment programs.

Additionally, the Bureau of Economic Analysis of the Department of Commerce uses ES-202 data as a base for estimating a large part of the wage and salary component of national personal income and gross national product. These estimates are instrumental in Federal allocation of revenue-sharing funds to State and local governments, and funds to hospitals under the Health Care Finance Administration.

The ES-202 data are one of the best sources of detailed employment and wage statistics used by business, and by public and private research organizations. State governments often use ES-202 data in econometric models to determine projected income tax revenues. These data also are frequently provided to private companies for use in economic forecasting.

Many State employment security agencies periodically tabulate and publish covered private and Federal employment and wage data by county or by size of reporting unit. Such detailed data are not regularly available from any other source.

Disclosure restrictions

In accordance with BLS policy, data provided to the Bureau in confidence are not published and are used only for specified statistical purposes. BLS withholds publication of employment and wage data for any industry level: (1) which consists of fewer than three reporting units; and (2) in which a single unit accounts for 80 percent or more of the industry's employment. A State may also request that data be withheld for any industry level for which the above criteria would not protect the identity of cooperating employers. The totals of all industry levels for the States and the Nation include the nondisclosable data suppressed within the detailed tables. These totals cannot, however, be used to reveal the suppressed data.

Estimated data

To reduce the effect of data excluded because of late reporting by private and government employers, State agencies estimate employment and wages for such employers and include them in each quarterly report. Estimates are prepared for the individual reporting unit based on data reported for the preceding quarter and trends in employment reported by employers and installations in the same industry. Information obtained from other sources also is used.

U.S. DEPARTMENT OF LABOR
BUREAU OF LABOR STATISTICS

REGION I - BOSTON
